Steps

Set-up the basics
Create products, locations / units, users, customers / vendors, accounts and documents.

Define cut-off or migration date
Date where Abakus becomes the main system, and the official date for all initial account balances.

Adjustments and training
We train all relevant users in your team and make required set-up adjustments based on your workflows.

Import current stock and balances
We will import current stock levels, account balances and current customers/vendors opening balances.

1. Start organized.
2. Keep it updated. Always.

We believe that for a small business it is critical to keep **all important accounts up-to-date** in order to have a clear vision of the business - in real time - instead of making decisions looking at the rearview mirror.

To help our users, we define these basic implementation steps, which our past experience tells us are the basic requirements, **without making migration or deployment a long nightmare**. We know that your time and your team's is very valuable, and that is why we will optimize it to the maximum.

Contact us today to learn more about this initial setup and implementation service.

Contact us

We walk your team through the initial set-up and implementation so you can begin managing your company faster than ever before.
